

UNIVERSAL PLUG N PLAY CONCEPT

Auto-Connect Plug N Play harnesses simplify integration with your vehicle's OEM audio system, enabling easy connection to amplifiers, DSPs, or other accessories without modifying OEM wiring.

HOW TO INSTALL

1. Disconnect the OEM head unit/amplifier. Attach the harness to the vehicle's OEM connector.
2. Reconnect the OEM head unit/amplifier using the connector in the Plug N Play-harness.
3. Use the provided ISO-connectors for high-level audio signal and 12V power/ground.
4. Route processed audio back to the vehicle's speakers using the ISO-connector.

*The OEM head unit typically uses a fuse rated between 10A and 20A. Make sure your installed accessories do not exceed this power draw.

A Digital Signal Processor or High /Low Level Line Output Converter typically requires 1-5A and can be run on the provided power. For higher-powered amplifiers or accessories, you should run a dedicated power wire directly from the vehicle's battery.
